SUMMARY

Senior Full-Stack Ruby on Rails Developer with 5+ years delivering scalable platforms across healthcare, education, civic tech, and SaaS. Owns the full product lifecycle — architecture, development, deployment, and infrastructure. Leverages AI tooling (MCP servers, Superset, Gemini, ChatGPT, Cursor) to automate workflows and accelerate delivery. Active open-source contributor to RuboCop and RSpec. Trusted collaborator with UNICEF and UNFPA on high-impact humanitarian infrastructure.

EXPERIENCE

Senior Full-Stack Engineer

09/2024 - Present

SoftServe | Educational Ecosystem & Media Platform

Pro bono mostly, part time

- Led full platform redesign across a team of 2–6 developers, coordinating workstreams across redesign, new features, refactoring, and production support simultaneously.
- Owned end-to-end delivery of an **AI-assisted authoring system**, enabling administrators to generate and refine articles via **multiple AI models and custom prompts** — driving **UX**, model flexibility, and governance decisions.
- Modernized the frontend by introducing TailwindCSS alongside Bootstrap, improving **maintainability** and responsiveness while **preserving all legacy** component functionality.
- Implemented Flipper **feature toggles** to enable safe, incremental rollouts without user disruption, supported by rollout planning and post-deployment monitoring.
- Reviewed pull requests, **mentored** junior developers, and enforced consistent asset structure and component reuse standards across the team.

Senior Full-Stack Engineer

10/2024 - 12/2025

SoftServe | Global HealthTech Platform

- Developed and maintained ReactJS components and GraphQL-integrated features across web and mobile, collaborating with backend and design teams in a Scrum of Scrums environment across 3 teams and 10–14 engineers.
- Integrated Redis for **caching**, **session management**, and **background job queues**, reducing database load and supporting asynchronous processing at scale.
- Migrated legacy test suites to modern CI/CD-aligned stacks, cutting execution time by **30–60%** and doubling release cadence — maintaining coverage across **RSpec/Capybara**, **Jest**, **MochaJS**, and **Cucumber**.
- Contributed to monolith decomposition across 2 teams — designing service boundaries, isolating domain logic, and initiating an asset structure overhaul that eliminated duplication across the codebase.
- **Mentored** 3–6 junior developers through code reviews and enforced architectural standards across teams.
- Proposed and independently built an automated deployment and release pipeline, reducing QA time involvement by ~40% and minimizing developer intervention in testing workflows.

Middle Full-Stack Engineer

09/2023 - 03/2024

SoftServe | Corporate Social Responsibility Platform - OpenTech

- Owned architecture decisions, task estimation, prioritization, and distribution across the full development lifecycle.
- Owned deployment end-to-end — building and maintaining **deployment** and build scripts, integrating CI pipelines, and collaborating with **DevOps** to ensure platform stability and release reliability.
- Led platform redesign, driving technical and architectural decisions while maintaining direct communication with client stakeholders to align delivery with product goals.

- Delivered **full-stack** development across feature builds, code reviews, unit and integration testing, vulnerability fixes, and SEO improvements.
- Maintained product documentation and provided ongoing production support, ensuring platform continuity for a volunteer-driven social initiative.

Middle Full-Stack Engineer

01/2022 - 09/2024

SoftServe | EdTech Marketplace & Navigation System

- Tech-led a 2–6 person team on a nationwide education search platform, owning architecture, task estimation, prioritization, and delivery across feature development, redesign, and ongoing support.
- Owned full DevOps lifecycle — building and maintaining deployment scripts, managing CI integration, and handling server infrastructure setup and management to ensure platform stability.
- Drove Elasticsearch-powered search engine development and optimization, supporting discovery of schools, kindergartens, courses, and events across the platform.
- Improved test coverage, reliability, and execution performance through unit, integration, and E2E test suites, maintaining quality across active development cycles.
- Conducted code reviews, pair programming, and knowledge sharing sessions, coaching less experienced developers and raising team-wide engineering standards.
- Delivered SEO improvements, vulnerability fixes, and documentation maintenance, ensuring platform compliance, discoverability, and long-term maintainability.
- Implemented **MMonit** to automatically monitor and restart **Elasticsearch** on failure, with alerting for unrecoverable states — eliminating the need for manual DevOps intervention, reducing infrastructure costs, and significantly improving platform uptime and stability.

Middle Full-Stack Engineer

04/2022 - 03/2023

SoftServe | Social Integration Platform (Cross-border)

- Co-built and maintained a 2-person full-stack platform providing Ukrainian immigrants with practical guidance on university entry, family relocation, and everyday life in Poland.
- Owned **architecture design**, **deployment scripts**, and CI integration end-to-end, ensuring reliable and repeatable releases with minimal team overhead.
- Delivered **SEO** improvements to increase organic discoverability of content, helping reach a wider audience of Ukrainian newcomers actively searching for guidance.
- Maintained **code quality** through code reviews, unit and integration testing, and vulnerability resolution — ensuring a **stable, secure** platform for a growing readership.
- Handled task estimation and prioritization independently within a lean 2-person team, balancing new content features with platform maintenance and technical debt.

Junior Full-Stack Engineer

03/2022 - 12/2023

SoftServe | Crisis Response & Information Portal

- Architected and implemented scalable solutions, driving core **Ruby on Rails** application development end-to-end
- Designed and maintained **build, deployment, and CI/CD pipeline scripts**, streamlining release cycles
- Foster knowledge sharing through **pair programming**
- Delivered measurable gains in online visibility through targeted **SEO optimizations**
- Authored comprehensive **unit and integration test suites**, ensuring application reliability and stability
- Identified and remediated **security vulnerabilities**, maintaining robust protection for sensitive user data
- Contributed to **system architecture and design decisions**, balancing technical debt against delivery speed

Junior Full-Stack Engineer

05/2022 - 05/2022

SoftServe | Medical Emergency Response & Volunteer Management Platform

- Drove core **Ruby on Rails** application development, delivering a polished, **user-centred** experience
- Conducted thorough **code reviews**, maintaining high code quality and consistent best practices across the codebase
- Implemented **SEO improvements**, increasing the foundation's organic reach and online discoverability

Junior Full-Stack Engineer

08/2021 - 03/2022

SoftServe | Social Analytics & Wellbeing Index

- Implemented **background jobs** to delegate large and resource-intensive calculations, ensuring a smooth and responsive user experience
- Built and maintained **mailers** for transactional and notification email workflows

- Wrote unit and integration tests and collaborated via pair programming

EDUCATION

Computer Software Engineering

International University of Economics and Humanities - Bachelor's degree

09/2020 - 06/2024

CERTIFICATES

The Git & Github Bootcamp ↗

Udemy
